<sup>6</sup>Senior Resident, Department of Ophthalmology, ESIC Medical College & Hospital, Faridabad.
<sup>7</sup>Senior Resident, Department of Ophthalmology, ESIC Medical College & Hospital, Faridabad.
<sup>8</sup>Junior Resident, Department of Ophthalmology, ESIC Medical College & Hospital, Faridabad.

#### ABSTRACT

#### BACKGROUND

In many parts of India Glaucoma patients present for Ophthalmology check-up when their disease is in advanced stage and at that point of time majority of their vision is already lost. There are many studies addressing awareness about Glaucoma in general population but there is a paucity of literature on awareness in medical students. Keeping this in mind we planned this study to judge knowledge about Glaucoma in medical students of ESIC Medical College & Hospital, Faridabad. As these medical students will have huge responsibility of Glaucoma awareness in society and early referral of Glaucoma patients to Ophthalmologist will be possible only if these future doctors are sensitized.

Aim and Objectives of the study is to know level of awareness about Glaucoma in medical students (I to V semester) at ESIC Medical College & Hospital, Faridabad.

#### MATERIALS AND METHODS

Study was carried out at ESIC Medical College & Hospital, Faridabad from Nov 2017 to Jan 2018. 232 students from I, III and V semester participated in study after complete explanation of study procedure. This study was carried out when Glaucoma teaching was yet to begin for these students. Their Glaucoma knowledge was tested using questionnaire with 20 questions on different aspects of Glaucoma.

#### RESULTS

All the students knew Glaucoma as an eye disease. 71.55% students knew that compliance of medication is very important in Glaucoma treatment. 53.45% students did not know that Glaucoma causes peripheral vision loss in early course of disease. 41.38% students did not know that vision loss because of Glaucoma is irreversible. 54.71% students did not know that open angle Glaucoma is often asymptomatic. 45.69% did not know that Glaucoma medications needs to be continued even after intra ocular pressures are controlled. 55.17% students did not know that high myopia is a risk factor for Glaucoma.

#### CONCLUSION

Although 100% of medical students heard about Glaucoma, their knowledge regarding basic pathophysiology, treatment principals of Glaucoma were deficient. Many of them did not know common risk factors for Glaucoma. We need to focus on these deficient areas so that in future, society will get better medical professionals who will help in early suspicion and diagnosis of Glaucoma.

#### BACKGROUND

Glaucoma also known as "sneak thief of Vision" is a blinding eye disease.<sup>1</sup> Damage once occurred is practically irreversible.<sup>2</sup> Early diagnosis and prevention of further visual loss is most effective way to provide better quality of vision in Glaucoma patients.<sup>3</sup>

In many parts of India Glaucoma patients present for Ophthalmology check-up when their disease is in advanced stage and at that point of time majority of their vision is already lost.<sup>4</sup>

## **Original Research Article**

## Jebmh.com

This delayed presentation is due to the fact that central vision remains normal until advanced stage of Glaucoma.<sup>5</sup> India needs health care professionals, who are sensitized for early diagnosis of Glaucoma. Only then early referral of Glaucoma patients to Ophthalmologist will be possible. There are many studies addressing awareness about Glaucoma in general population but there is a paucity of literature on awareness in medical students. Keeping this in mind we planned this study to judge knowledge about Glaucoma in medical students of ESIC Medical College & Hospital, Faridabad. As these medical students will have huge responsibility of Glaucoma awareness in society and early referral of Glaucoma patients will be possible only if these future doctors are sensitized. Also, with this study we planned to find out lacunae about Glaucoma knowledge in medical students so that we can take necessary steps to fill these lacunae.

#### MATERIALS AND METHODS

This study was carried out at ESIC Medical College and Hospital, Faridabad from Nov 2017 to Jan 2018. It was a cross-sectional descriptive type of study. Informed verbal consent was taken from I, III and V semester students after detailed explanation regarding study procedure. It was explained to the students that they should not mention their name on questionnaire. Study was conducted in accordance with declaration of Helsinki.

#### Inclusion Criteria

I, III and V semester MBBS students, studying at ESIC Medical College & Hospital Faridabad and giving their informed verbal consent for participation after complete explanation regarding study procedure.

#### Exclusion Criteria

Students NOT giving their informed verbal consent for participation after complete explanation regarding study procedure.

Semester	Total No. of Students	No. of Students Participated	
I	100	88	
III	97	79

All the students had heard about Glaucoma. 64.22% students knew that long term steroids can cause Glaucoma. 61.21% students knew that corneal oedema can be one of

the presentations of developmental Glaucoma. 73.71% students knew that cataract surgery cannot prevent

# Jebmh.com

Glaucoma. 71.55% students knew that compliance of medication is very important in Glaucoma treatment.

Major lacunae in knowledge were present in knowledge that Glaucoma causes peripheral vision loss in early course of disease, 53.45% students responded incorrectly. 41.38% students did not know that vision loss because of Glaucoma is irreversible. 42.24% students did not know that Glaucoma and ocular hypertension are different entities. 54.71% students did not know that open angle Glaucoma is often asymptomatic. 45.69% did not know that Glaucoma medications needs to be continued even after intra ocular pressures are controlled. 55.17% students did not know that high myopia is a risk factor for Glaucoma.

### DISCUSSION

There are studies from India which were carried out with the aim of assessing awareness of Glaucoma in general population. But less no of studies are available on awareness of Glaucoma in medical students. Medical students will be going to society as future doctors. They will have huge responsibility of Glaucoma awareness and early diagnosis/referral of patients in future.

We have carried out this study in I, III, V semester students when their Ophthalmology teaching on Glaucoma had not begun. This had an added advantage of finding lacunae in their knowledge and then rectifying it with specific approach.

On thorough literature search we found only few studies particularly about awareness of Glaucoma in medical students in India. There are many studies about awareness in general population with simple details of Glaucoma. But only few studies were carried out on medical students with specific details about disease. We compared our study results with some other similar studies we found.

	Our Study	N. Nageeb et al <sup>6</sup> (Clinicians)	Ichhpujani P et al <sup>7</sup> (Health care Professionals)	Komolafe O.O. et al <sup>8</sup> (Clinical Directorate)	
Have you ever heard about Glaucoma	100%	100%	100%	100%	
Visual field testing is one of the important tool to diagnose Glaucoma	47.84%	5.5%			
Vision loss because of Glaucoma is irreversible	58.62%	72.3%	60.5%	76.7%	
Long term steroid use can cause Glaucoma	64.22%	83.3%			
High blood pressure is a risk factor for Glaucoma	66.81%	77.7%			
Diabetes is a known risk factor for Glaucoma	55.60%	77.7%			
Family members of Glaucoma patients' needs ophthalmic examination for Glaucoma	47.41%	94.4%	76%	31.7%	
Compliance of medications is very important in case of Glaucoma	71.55%		77.3		
Blindness is very common in case of untreated Glaucoma	60.34%			90%	
Glaucoma causes peripheral vision loss in early course of disease and not central vision loss	46.55%			76.7%	
Often symptoms are not prominent in Open Angle Glaucoma	45.29%			61.7%	
Table 6. Comparison with other Similar Studies					

Variation in Glaucoma knowledge to certain extent was expected as our study was carried out in medical students before their Glaucoma teaching was started whereas medical experience in participants of other compared study was different. Nageeb et al carried out their study in clinicians in India. As per Ichhpujani P et al they carried out their study in healthcare professionals in India. Whereas Komolafe O.O. et al mentioned that they carried out their study in clinical directorate in Nigeria.

## CONCLUSION

Although 100% of medical students had heard about Glaucoma, their knowledge regarding basic pathophysiology, treatment principals of Glaucoma was deficient. Many of them did not know common risk factors for Glaucoma. We need to focus on these deficient areas so that in future, society will get better medical professionals who will help in early suspicion and diagnosis of Glaucoma.
